The first one was the end of 32-bit architecture. The second change is the shift from locally installed apps to browsers and the cloud-based services. The latter is already becoming the major trend in the technology industry, a good example being the BitTorrent's decision to deliver a web version in preference to the 64-bit version of uTorrent and BitTorrent. This means that Mac users will no longer need to install uTorrent apps on their devices, instead, they will need to search for uTorrent alternative for Big Sur and Monterey, thus bringing to an end 12 years of consistency and stability. Fortunately, there is a long uTorrent alternative list including Folx, Transmission, WebTorrent, and others. Even though everything is moving up to the clouds lately, we still think uTorrent should have created a 64-bit version of their torrent client for Mac on their devices.
